Technical Skills

Languages: TypeScript, C#, Python, Java, SQL, JavaScript, C, C++

Frameworks & Libraries: React, .NET, FastAPI, PyTorch, TensorFlow, YOLOv8, Gemini Vision, JavaFX, Unity

Cloud & Tools: Azure (SQL Database, DevOps), Google Cloud (Cloud Run), CI/CD, Docker, Git, GitHub, REST APIs, Firebase/Firestore (NoSQL)

Concepts & Practices: Unit & Integration Testing, Code Review, Data Structures & Algorithms, Object-Oriented Programming, LLM/Agent Systems, RAG

Experience

Brock Solutions

Apr. 2026 – Present

Software Developer Intern | TypeScript, C#, LLM Agents, React, .NET

Kitchener, ON

- Developed 10 REST API endpoints in C#/.NET with token-based authentication and account-scoped authorization, serving 10+ airline clients through a customer-facing portal on Azure SQL Database.
- Delivered a full-stack support module in React (TypeScript) and .NET with cascading, context-aware dropdowns that streamlined case intake and reduced data-entry errors.
- Built REST API integrations with ServiceNow, syncing case and support ticket data for client users.
- Authored 40 unit and integration tests across 12 endpoints covering authentication, access control, and entity validation, run in Azure DevOps CI/CD pipelines to catch regressions.
- Architected a multi-agent LLM system with retrieval-augmented generation (RAG), an orchestrator directing 5 subagents that retrieve context across 4 internal repositories to automate cross-repo analysis and planning.

University of Guelph

Apr. 2025 – Sep. 2025

ML & Assistive Devices Research Assistant | C, C#, SQL, Firestore

Guelph, Ontario

- Debugged and extended C# logic in Unity for a VR mirror-therapy app, managing a Firestore backend that stored, synced, and retrieved patient movement and session data across devices
- Maintained Arduino (C) firmware for an arthritis rehabilitation glove, integrating sensors, real-time control logic, and breadboard wiring; validated stable operation across 20+ participants
- Analyzed 100+ temperature sensor readings for a diabetic sock project in SQL and Excel, building trend visualizations and applying Isolation Forest anomaly detection to flag abnormal patterns

Projects

Real-Time ASL Detection Program | Python, PyTorch, TensorFlow, YOLOv8, Labellmg, Jupyter

- Built a real-time American Sign Language detection system in Python with PyTorch, TensorFlow, and YOLOv8, classifying 10 signs at 85%+ accuracy through a live video interface
- Annotated and managed a 1,500-image dataset with Labellmg, creating 80/20 train/test splits for model training and validation

Bridge | TypeScript, React, FastAPI, Python, Google Cloud Run, Gemini Vision

- Co-developing an early-stage startup: a 3-role peer-to-peer donation platform with live delivery tracking (Leaflet/OSRM) and in-app chat on a FastAPI backend deployed to Google Cloud Run with Firebase Auth and Firestore
- Integrated Gemini Vision to turn a donation photo into a structured item list with names, quantities, and sizes, cutting listing time from minutes to seconds

Education

University of Guelph

Expected Apr. 2028

Bachelor of Engineering in Computer Engineering (Honours)

Guelph, Ontario

- **Relevant Coursework:** Data Structures and Algorithms (C), Digital Systems Design, Programming for Engineers (Java, C++)

Extracurricular

Islamic Relief at UofG: Created marketing content and coordinated campus charity fundraising events

Focus On Engineering Guelph: Built and maintained a textbook rental website and ran engineering competitions
